HEALTH SCIENCES LEARNING RESOURCES CENTER

February 10, 1975

Professor Joshua Lederberg
Department of Genetics
School of Medicine
Stanford University
Stanford, California 94305

Dear Professor Lederberg:

Thank you very much for enclosing the information on SUMEX plus your appended note. I have assembled some information of what we're trying to do here at the University of Washington in terms of computer based education. One item is a copy of a grant which was funded by the National Fund for Medical Education which explains in general our goals. The second is some information about the language from which we hope to develop our machine independent system. The third enclosure is a print-out of one of our cases. It shows the type of responses given and may give you a sense of how the interaction takes place between learner and teacher as represented by the computer. I hope that this information is useful to you. Obviously I would be privileged and delighted to discuss this system with you more.

Sincerely,

James R. McArthur, M.D.
Associate Professor of Medicine
